

RollerMouse Ergo

Remarkable ergonomic impact and customisability

RollerMouse Ergo stands out as an exceptional centered mouse offering you versatility and precise control, making it the perfect companion for extended hours spent working in front of your computer.

The unique texture on the Rollerbar enables effortless navigation control without the need for gripping or squeezing. The wrist rest is made of vegan leather with an anti-bacterial surface and memory foam that molds to the hand's shape. RollerMouse Ergo is made of recycled aluminum and you can tailor the mouse sensitivity with up to 4000 DPI.

Add the integrated arm support to provide the ultimate support for maintaining a neutral typing and mousing position in either a standing or sitting position. To enhance the ergonomic advantages, we recommend pairing the RollerMouse Ergo with a Balance Keyboard featuring adjustable tilt, allowing you to maximize your comfort and well-being while working.

Customisability

You can easily customise your RollerMouse Ergo with buttons for cursor speed, click force or volume or even better by downloading the free driver to personalize even further for your preferences. This enables you to tailor the mouse to any specific needs in different applications or situations.

Anti-bacterial

Rollerbars and wrist rests can accumulate dust, dirt, and bacteria over time. The anti-bacterial treatment on RollerMouse Ergo helps reducing the growth and spread of bacteria, potentially reducing the risk of cross-contamination.

Sustainable materials

Contour's aspiration is to continently improve our usage of sustainable materials in our production. RollerMouse Ergo is Contour's first centered mouse produced using pre-consumer recycled aluminum, this sustainable material is used for both the base and the wrist rest.

Technical specifications RollerMouse Ergo

Connectivity	USB wired
Operating system	Windows and OSX
